

GREETING FROM MALWANCHAL UNIVERSITY

Mrs. Aruna Bhadoria
Chancellor

Infection control practices are the integral part of part for health care delivery. A proper infection control practice not only reduces the mortality, morbidity as well as cost of therapy. It is utmost important for implementing accreditation programmes for hospital like NABH.

Mr. N.K. Tripathi
Vice Chancellor

Unfortunately technical knowledge in this direction is less among nurses and paramedical students especially among rural hospitals. The number of participants will be 200 and will be entitled on first cum first register basis.

CIRCULAR

Malwanchal University is organizing a certificate course entitled "Hospital Infection, Prevention and Control" to enhance the skills and knowledge of the students. Interested students and interns can enroll their names with Ms. Aarti Verma in Index Medical College, Hospital & Research Centre on before 1st December, 2021. The Course commences on 6th December, 2021 and further details are as per the brochure attached.

With kind Regards,

Registrar

MALWANCHAL UNIVERSITY, INDORE
REPORT OF EVENT **Date: 15th December 2021**

EVENT DETAILS:

VALUE ADDED COURSE:HOSPITAL INFECTION, PREVENTION & CONTROL

Effective infection prevention and control is central to providing high quality health care for patients and a safe working environment for those that work in healthcare setting. It is important to minimize the risk of spread of infection to patient and staff in hospital by implementing good infection prevention control practices.

Keeping the above thought in mind Malwanchal University organized a value added course entitled "Hospital infection: prevention and control" for undergraduates of nursing and paramedical colleges from 6th to 13th December 2021. The duration of the course was 15 hours.

Many students from both streams enrolled and utilized the opportunity to update themselves in all aspects of hospital infection prevention and control practices. The speakers included distinguished professors from AIMS, Dewas affiliated to Madhya Pradesh Medical Science University, Jabalpur and Malwanchal University Indore.

Mr. Javed Ali (Quality Manager, AIIMS Dewas) gave an overview of infection control practices and there were 2 tiers of recommended precautions to prevent the spread of infections in healthcare settings: Standard Precautions and Transmission-Based Precautions. Standard precautions are used for all patient care. They're based on a risk assessment and make use of common sense practices and personal protective equipment use that protect healthcare providers from infection and prevent the spread of infection from patient to patient. Transmission-based precautions are used in addition to Standard Precautions for patients with known or suspected infections

Dr. Madhurendra Singh Rajput (Professor Department of Microbiology, AIMS Dewas) spoke about aseptic precautions and immunization for healthcare workers. Healthcare professionals commonly use aseptic technique when they're:

- Handling surgery equipment
- Helping with a baby's birth by vaginal delivery
- Handling dialysis catheters
- Performing dialysis
- Inserting a chest tube
- inserting a urinary catheter
- Inserting central intravenous (IV) or arterial lines
- Inserting other draining devices
- Performing various surgical techniques

MALWANCHAL UNIVERSITY, INDORE
REPORT OF EVENT **Date: 15th December 2021**

There are four chief aspects of the aseptic technique: barriers, patient equipment and preparation, environmental controls, and contact guidelines. Each plays an important role in infection prevention during a medical procedure. Barriers used in aseptic technique were discussed like PPE gowns, sterile gloves and masks for the patient and healthcare provider.

Dr. Ramnath discussed healthcare-associated infections (HAI). HAIs are a threat to patient safety. HAI related surveillance, outbreak investigations, laboratory research, and prevention of healthcare-associated infections was discussed. The Infection Control Assessment Tools were discussed to assist health departments in assessing infection prevention practices and guide quality improvement activities (e.g., by addressing identified gaps). These tools may also be used by healthcare facilities to conduct internal quality improvement audits. The healthcare-associated infections (HAIs) discussed included central line-associated bloodstream infections, catheter-associated urinary tract infections, ventilator-associated pneumonia and surgical site infections.

Dr. Munesh K. Sharma, and Mr. Kailash Jatav covered the topics of usage of care bundle for monitoring and avoiding HAIs and disinfection and sterilization in CSSD. The importance of environmental surveillance in high risk areas was also discussed. The environment within the hospital is critical for life support. Environmental concerns affect the hospital internally and externally. Indeed, the hospital requires a safe internal environment. Externally the hospital is a contributor to the environmental load of the community. Few internal factors that have a significant impact on hospital environment such as waste management, noise, and infection control; and external factors such as sources and treatment of water, sewage treatment and disposal were covered.

Dr. Sachin Kumar Mishra (Associate Professor) explained to the participants the concept of antibiotic stewardship. Antibiotic stewardship is the effort to measure and improve how antibiotics are prescribed by clinicians and used by patients. Improving antibiotic prescribing and use is critical to effectively treat infections, protect patients from harms caused by unnecessary antibiotic use, and combat antibiotic resistance. The aim was to offer participants a set of key principles to guide efforts to improve antibiotic use and, therefore, advance patient safety and improve outcomes.

Diagnostic tests should be used wisely to avoid unnecessary antibiotic therapy or therapy that is unnecessarily broad-spectrum, with consideration of healthcare value. Rapid diagnostic tests, biomarkers, and decision rules that have acceptable performance characteristics to differentiate bacterial vs. non-bacterial infection should be used to avoid use of unnecessary antibiotic therapy. Bacterial cultures with susceptibility testing should be collected, handled and processed promptly and appropriately to identify specific bacteria causing infection and facilitate use of narrow-spectrum antibiotics whenever possible.

Recommendations for initial empiric antibiotic therapy choices should balance treatment efficacy, severity of illness (i.e., sepsis), and the potential for adverse events including the development of antibiotic resistance. When multiple therapeutic options are available, a hierarchy of antibiotic treatment recommendations should be provided with "first choice" options being those with

MALWANCHAL UNIVERSITY, INDORE
REPORT OF EVENT **Date: 15th December 2021**

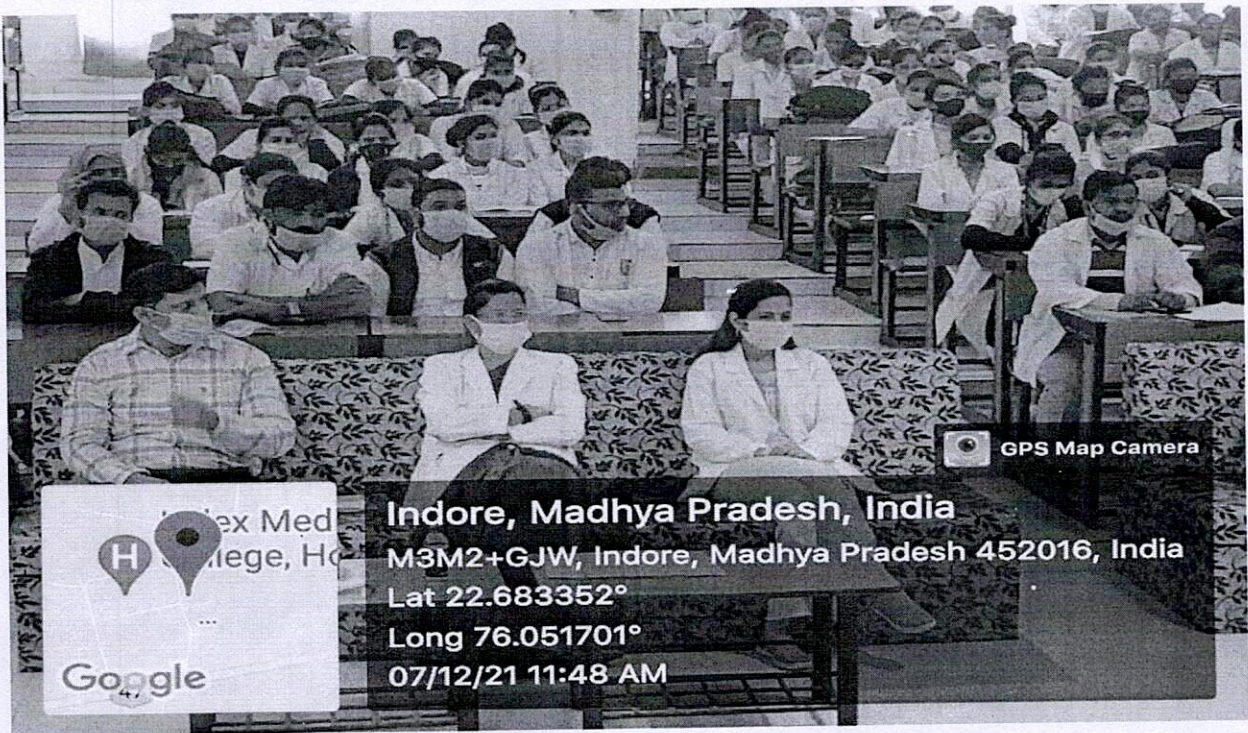

adequate therapeutic efficacy, the lowest risk of facilitating antimicrobial resistance, and the lowest risk of promoting C. difficile and other adverse events, with consideration of healthcare value.

The practical training aspects was successfully covered by highly qualified staffmembers who guided the students during interactive sessions. The concept was framed by Dr. Sudha Shrivastava Director IQAC, Dr. RamanathK. Professor &HOD and Dr. Sachin Mishra, Professor Dept. of Microbiology,IMCH&RC. The program got a positive feedback from the participants.
